Neues Bohrbild

This technical drawing illustrates a shaft-hub assembly. A shaft is inserted through a hub. A lock washer is positioned between the shaft and the hub. A lock nut is threaded onto the shaft, and its locking surface is pressed against the lock washer. Two arrows point to the contact surface between the lock nut and the lock washer, indicating the point of friction. A yellow coiled spring is shown below the hub, and a grey rectangular block is to the left of the shaft.

Der Federmechanismus kann separat erworben werden.
